

Portable Calibrator With Signal Simulator

Applications

- Troubleshoot cabling and wiring
- Simulate vibration signals for accelerometers and velocity probes
- Simulate machinery-speed signals
- Calibrate:
 - Accelerometers
 - Proximity probes and drivers
 - Monitoring systems
 - Analyzers
 - Avionics equipment

Advanced Features

- High-accuracy sensor simulation
- Built-in charge converter
- Automatic low-battery shutdown
- Built-in power supplies
- Automatic mass-load correction
- Networking capabilities
- Fully-automated testing
- Data exports to PDF certificate or CSV
- Advanced computer algorithms for accurate readout

AT2040

Portable Vibration Test Set

Overview

The AT2040 portable vibration test set is specifically designed to calibrate and verify the working conditions of accelerometers and vibration meters, and to simplify vibration system installs.

AT2040 features direct signal inputs for IEPE, charge (piezoelectric), 4-20mA transmitters, coil, and proximity probe sensors. It can also supply power to sensors using on-board positive and negative variable-voltage power supplies. This includes voltage supplies for 4-20mA transmitters, Bently Nevada powered sensors, proximity probe driver power, and adjustable power output for common aviation sensors such as Wilcoxon, Honeywell, Aces, and Chadwick-Helmuth.

The built-in signal simulator and function generator streamline end-to-end system and analyzer checkouts. Artificial transducer signals can perform over a wider amplitude range and are far more accurate than using an electrodynamic shaker and accelerometer setup.

The superior accuracy of the AT2040 is ensured using a laser-calibrated primary reference, a precision quartz reference accelerometer, and closed-loop control employing distortion compensation algorithms. Calibration of the AT2040 and its accuracy has been [accredited to ISO 17025](#) by a 3rd party, A2LA.^[1]

Functionality

- Create calibration certificates for vibration instruments.
- Test all types of vibration sensors and transducers from a variety of accelerometer and proximity probe manufacturers.
- Control AT2040 from a remote location using a Wi-Fi-connected computer.
- Test and verify performance of vibration meters, portable data collectors, and cabling using an accurate and traceable signal generator to simulate a variety of sensors.
- Rapidly identify and solve issues in vibration system setup using comprehensive, user-friendly software tools.

Portable Vibration Test Set

Performance		
Frequency Range (operating) ^[1]	5 Hz to 10 kHz	360 to 600000 CPM
Maximum Amplitude (100 Hz, with no payload)	20 g pk 15 in/s pk 50 mils p-p	196 m/s ² pk 380 mm/s pk 1270 μm p-p
Maximum Payload ^[2]	800 grams	
Sensor Test Method	Automatic sweep or manual operation	
Test Types	Manual sensitivity Automatic sweep	Sensor simulation Certification
Sensor Select	Built-in transducer library	
Calibration Sheets	Automatic creation to memory Export to USB drive in PDF or CSV format No spreadsheet or user input required Certificate includes test point with graph	
Memory	16GB (internal storage) MicroSD slot for additional storage	

Vibration Signal Accuracy	
Acceleration (5 Hz to 9 Hz)	± 4 %
Acceleration (10Hz to 10kHz)	± 2.5%
Displacement (30Hz to 150Hz)	± 3 %
Amplitude Linearity (100 gram payload, 100Hz)	< 1 % up to 10g pk
Waveform Distortion (100 gram payload, 30Hz to 2kHz)	< 5% THD (typical) up to 5g pk

Simulation Performance ^[4]		
Frequency Range	1 to 11,000Hz	
Maximum Amplitude Examples:	1 V 100g at 10mV/g 10g at 100mV/g	1000 pF 10 pF/g @ 100g 100 pF @ 10g
Test Type	Manual	
Accuracy	< 1 % error at 10g	
Simulator Sensor Types Supported	Accelerometer: <ul style="list-style-type: none"> • Charge • Voltage • IEPE Velocity 4-20mA vibration transmitters Proximity probes	

Input/Output	
Test Sensor Inputs	Accelerometer: <ul style="list-style-type: none"> • Charge • Voltage • IEPE Velocity 4-20mA vibration transmitters Proximity probes
Bias Measurement	Yes
Built-in Excitation Current and Supply Voltages for Transducers	IEPE current source -24V proximity driver source +24V 4-20mA supply Variable voltage output supply 5-10V
External Source In (Max)	1V AC RMS

Readout		
Acceleration	g pk m/s ² pk	g RMS m/s ² RMS
Velocity	mm/s pk in/s pk	mm/s RMS in/s RMS
Displacement (peak to peak)	mils p-p	μm p-p
Frequency	Hz	CPM

Power		
Internal Battery (sealed solid gel lead acid)	12V DC	6 amp hours
AC Power (for recharging battery)	100-240V	50-60Hz
Operating Battery Life	100 gram payload, 100Hz 1g pk 12 hours 100 gram payload, 100Hz 10g pk 3 hours	

Physical		
Sensor Connectors	BNC Terminal strip	DIN
Display	4.3" TFT LCD with 480 × 272 resolution	
Controls	2 dials with touch screen	
Dimensions (H × W × D)	8.5 × 12 × 10 in	22 × 30.5 × 28 cm
Weight	15.2lb	6.9kg
Sensor Mounting Platform Thread Size	¼-28	
Operating Temperature	32-122 °F	0-50 °C
Agency Requirements and Certifications	A2LA Accredited NIST Traceable EMC: EN61326-1 LVD: EN61010-1 ISO/IEC 17025:2017 RoHS	

Accessories		
Included Accessories	<ul style="list-style-type: none"> • Power cable • Micro dot (10-32) • ¼-28 stud • 2-56 UNC adapter • Universal Velocity Adapter Disc • Universal Accelerometer Adapter Disc 	<ul style="list-style-type: none"> • Short-handle wrench • 10-32 UNF stud • 6-32 UNC adapter • 10-32 UNF adapter • USB drive: loaded with setup software for custom sensor
Optional Accessories ^[3]	<ul style="list-style-type: none"> • Proximity Probe Adapter Kit (digital or manual micrometer) • Chadwick-Helmuth Velocimeter Cable • Triaxial Accelerometer Adapter 	
Warranty	2 years (includes drift/accuracy)	
Tech Support	Training webinars, email support	

[1] 100 gram payload.

[2] Maximum weight recommendations:

Frequency	0-100 Grams	100-250 Grams	250-500 Grams	500-800 Grams
10-100Hz	10g	4g	2g	1g
100-1000Hz	7g	4g	2g	1g
1000-10000Hz	3g	1.5g	0	0
